TO WHOM IT MAY CONCERN:

SchenkelShultz Architecture is a national architecture firm with multiple offices within the State of Florida specializing in commercial and institutional markets. Over the past several years, TKW Consulting Engineers, Inc. has provided professional civil and structural engineering services to our offices on Florida's west and east coasts, as well as within the Central Florida area.

Due to our diverse clientele, it is important that we associate with engineering consultants who are flexible and able to adapt to demanding schedules, as well as those capable of consistently providing accurate and professional technical expertise in both building site and structural engineering. TKW's knowledge of specific state and local governmental regulations regarding site design has proven invaluable in processing permit applications and meeting unique land development challenges. Structurally, the firm's experience with a variety of construction systems to suit individual building designs has been consistently demonstrated by TKW's engineering staff and has repeatedly proven to effectively serve the best interests of our clients in terms of accuracy and budget control. Construction administration services have also been professionally handled with prompt and accurate response to field questions, submittal reviews and inspections.

SchenkelShultz highly recommends the engineering firm of TKW Consulting Engineers for civil and structural engineering services with respect to expertise, integrity and overall performance in achieving a successful construction project, as well as establishing a professional long-term relationship for any future engineering consulting needs.
